

RADON

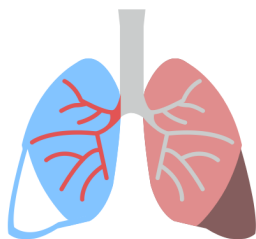

Get The
FACTS

Radon is a cancer causing gas that is invisible, odorless, tasteless, and can only be detected through testing. Radon comes from the natural breakdown of uranium in soil, rock, and water, and gets into the air you breathe. Radon enters buildings such as homes, schools, and child care facilities through cracks in the foundation.

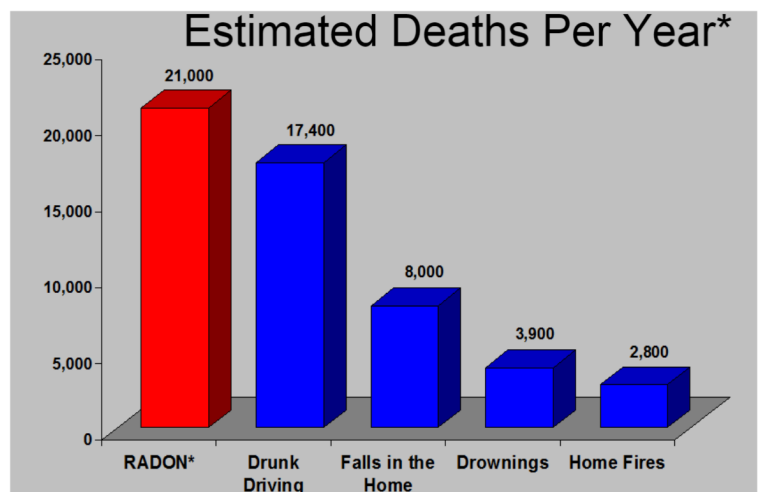

The U.S. Environmental Protection Agency (EPA) recommends taking action for radon levels at 4 picocuries per liter (pCi/L) and greater.

Colorado is ranked 6th in the nation for radon levels above 4 pCi/L.

Radon is the leading cause of lung cancer in non smokers.

Health & Sustainability
Department of Public Health & Environment

*Radon is estimated to cause about 21,000 lung cancer deaths per year, according to EPA's 2003 Assessment of Risks from Radon in Homes (EPA 402-R-03-003). The number of deaths from other causes are taken from the Centers for Disease Control and Prevention's 1999-2001 National Center for Injury Prevention and Control Report and 2002 National Safety Council Reports.

Protect yourself and the children in your facility by following these steps to test for radon

Was your facility licensed before January 14, 2016?

YES

Test your facility for radon before May 1, 2017

NO

Test your facility for radon within 6 months of occupancy

Do you want to perform radon testing on your own?

YES

Discounted test kits* are available at:
<https://securechek.com/CCC>

NO

Locate a certified contractor by visiting www.coloradoradon.info

Refer to CDPHE and specific test kit guidance

Schedule a time to test during normal operating hours between October and April

Keep test results on file at your facility

Review test results and follow CDPHE guidance and any suggested next steps

JAN	FEB	MAR
APR	MAY	JUN
JUL	AUG	SEP
OCT	NOV	DEC
